The mean population refers to the mean value of, for instance, the number of 5-years old at the end of year n and the number of 6-years old at the end of year n+1.

The mean population should be used together with vital data that have occurred during the year and distributed by age at the end of the year.

Due to changed handling in rounding off, data has not been presented for the years 1969-2005. Please refer to the tables for population instead.
