A person is defined as a child, regardless of age, when he/she is included in a household together with at least one of his/her parents and the child does not have any children or a partner in the same household. A parent-child relationship is created if a person is a biological parent, adoptive parent, guardian or 'Other person' to someone in the household.

Statistics are adjusted to avoid identifying individuals in cells with small values. Data in other cells has been changed so that totals remain unchanged, but in some cases this has not been possible.

To avoid identification, some persons are not linked at the level below the municipal level. These persons have been assigned to a DeSO/RegSO within their municipality.

Some RegSO codes have been updated with new area designations. See the Excel file Historiska förändringar av RegSO.

Type of household: Type of household gives the composition of the household and is broken down into Single (including Living alone), Cohabiting and Other household, all with or without children.
