## [POPC04] Total fertility rate by Year and Country, 2000-2020

|      | Faroe Islands | Greenland | Iceland |
|------|---------------|-----------|---------|
| 2000 | 2,58          | 2,33      | 2,08    |
| 2001 | 2,34          | 2,51      | 1,95    |
| 2002 | 2,56          | 2,57      | 1,93    |
| 2003 | 2,54          | 2,37      | 1,99    |
| 2004 | 2,59          | 2,42      | 2,03    |
| 2005 | 2,64          | 2,38      | 2,05    |
| 2006 | 2,50          | 2,26      | 2,07    |
| 2007 | 2,57          | 2,30      | 2,09    |
| 2008 | 2,58          | 2,25      | 2,14    |
| 2009 | 2,38          | 2,36      | 2,22    |
| 2010 | 2,51          | 2,19      | 2,20    |
| 2011 | 2,31          | 2,12      | 2,02    |
| 2012 | 2,57          | 2,02      | 2,04    |
| 2013 | 2,54          | 2,08      | 1,93    |
| 2014 | 2,56          | 2,04      | 1,93    |
| 2015 | 2,43          | 2,13      | 1,81    |
| 2016 | 2,62          | <b></b>   | 1,75    |
| 2017 | 2,48          |           | 1,71    |
| 2018 | 2,50          | <b></b>   | 1,71    |
| 2019 | 2,41          |           | 1,75    |
| 2020 | 2,32          |           | 1,72    |

Total fertility rate: The imputed number of live births experienced by women during their fertile period, assuming that their mortality is zero during this period

Country: Greenland: Fertility rates are calculated using the number of live births divided with the average of the population on January 1st of the given year and population on January 1st of the following year.
