Population: New figures for population 2012, 2013, 2014, 2015 and 2016. Model for delineation of the dwelling population has been slightly changed, so that there is a minor break in time series before and after 2012. The dwelling population is delineated using Matrikkelen (register for ground properties, addresses and buildings) and the Population register. Variables used are type of building, building status, type of utility unit and whether people are registered living in the utility unit or building. Holiday homes and utility units registered as other than dwelling are included in the population where the Population register state there are people registered on the dwelling address. The population register is also used to overrule other information, i.e. lack of approval certificate if people are registered living at the address. In addition, dwellings are imputed in buildings without utility units if people are registered on the building address.

Type of building: Type of building is established according to function, combined buildings, for instance combined dwelling and business buildings and storage and production buildings, are grouped by the function that occupies the main part of the utility floor space. Other buildingtypes mainly includes dwellings in garages, industrial buildings and other non-residential buildings.

Utility floor space: Figures at building level are no longer used for imputing at dwelling from 2012. Population and Housing 2001 (P&H2001) is still used as source. However, when ID of utility unit is changed, P&H2001 is no longer used. This may lead to an increase in number of unknown.

region: 1 January 2020, the municipality 1852 Tjeldsund was moved from Nordland to Troms og Finnmark.

Other building: Other buildingtypes mainly includes dwellings in garages, industrial buildings and other non-residential buildings.
