From the reference year 2025 onwards, a small controlled random uncertainty is introduced in all reported data. The uncertainty has been added to protect individuals so that no one risks being exposed in the statistics. As a result, the reported totals are not always equal to the sum of their reported components. If reported statistical values are added together to create a new total, the uncertainty is also added. There is therefore a risk that the new total contains greater uncertainty than that which – under the method – would have been added to a single value.

The method used for disclosure control is called Cell Key Method (CKM). You can read more about the method here: [Protection methods for disclosure control](<https://www.scb.se/en/documentation/statistical-methods/protection-methods-for-disclosure-control/>) and here: [Development of disclosure protection](<https://www.scb.se/en/documentation/statistical-areas-under-change/development-of-disclosure-protection/>).

Countries of birth with less than 20 people at national level are reported in the group “other countries”. Countries of birth with less than 10 people at the regional level are also reported in the group “other countries”.

At national level is statistics on population for all countries of birth reported in the table Population by country of birth, age and sex.

The statistics are presented according to the regional division as of January 1 of the following year.

.. = Means that information is not available, too uncertain to be presented or removed for reasons of confidentiality.

region of birth:

North Macedonia: North Macedonia was formerly called Macedonia, but the name was changed in 2019.

Latest update: 20260224 08:00

Units: number

Data type: Stock

Reference period: Dec 31 each year

Internal reference code: 0000086S
