From the reference year 2025 onwards, a small controlled random uncertainty is introduced in all reported data. The uncertainty has been added to protect individuals so that no one risks being exposed in the statistics. As a result, the reported totals are not always equal to the sum of their reported components.

If reported statistical values are added together to create a new total, the uncertainty is also added. There is therefore a risk that the new total contains greater uncertainty than that which – under the method – would have been added to a single value.

The method used for disclosure control is called Cell Key Method (CKM). You can read more about the method here: [Protection methods for disclosure control](https://www.scb.se/en/documentation/statistical-methods/protection-methods-for-disclosure-control/) and here: [Development of disclosure protection](https://www.scb.se/en/documentation/statistical-areas-under-change/development-of-disclosure-protection/).

The statistics are presented according to the regional division as of January 1 of the following year.
