From the reference year 2025 onwards, a small controlled random uncertainty is introduced in all reported data. The uncertainty has been added to protect individuals so that no one risks being exposed in the statistics. As a result, the reported totals are not always equal to the sum of their reported components.

If reported statistical values are added together to create a new total, the uncertainty is also added. There is therefore a risk that the new total contains greater uncertainty than that which – under the method – would have been added to a single value.

The method used for disclosure control is called Cell Key Method (CKM). You can read more about the method here: [Protection methods for disclosure control](<https://www.scb.se/en/documentation/statistical-methods/protection-methods-for-disclosure-control/>) and here: [Development of disclosure protection](<https://www.scb.se/en/documentation/statistical-areas-under-change/development-of-disclosure-protection/>).

Persons with dual citizenship, of which one is Swedish, are not included in these statistics.

The number of foreign citizens as of December 31 are reported according to the administrative subdivision on January 1 of the following year.
