From the reference year 2025 onwards, a small controlled random uncertainty is introduced in all reported data. The uncertainty has been added to protect individuals so that no one risks being exposed in the statistics. As a result, the reported totals are not always equal to the sum of their reported components.

If reported statistical values are added together to create a new total, the uncertainty is also added. There is therefore a risk that the new total contains greater uncertainty than that which – under the method – would have been added to a single value.

The method used for disclosure control is called Cell Key Method (CKM). You can read more about the method here: [Protection methods for disclosure control](https://www.scb.se/en/documentation/statistical-methods/protection-methods-for-disclosure-control/) and here: [Development of disclosure protection](https://www.scb.se/en/documentation/statistical-areas-under-change/development-of-disclosure-protection/).

A person is defined as a child, regardless of age, when he/she is included in a household together with at least one of his/her parents and the child does not have any children or a partner in the same household. A parent-child relationship is created if a person is a biological parent, adoptive parent, guardian or 'Other person' to someone in the household.

observations:

Number of households: Type of household gives the composition of the household and is broken down into Single (including Living alone), Cohabiting and Other household, all with or without children.
